

SAKWE BETRANDCLIFF

SOFTWARE ENGINEER | BACKEND • FULL-STACK • MOBILE

Buea, Cameroon • +237 672 973 390 • betrandcliff@gmail.com • linkedin.com/in/betrandcliff

PROFESSIONAL SUMMARY

Software engineer with 3+ years of professional experience building and deploying web, mobile, and backend systems. Hands-on experience across Node.js, NestJS, TypeScript, Laravel, Flutter, React, Next.js, SQL/NoSQL databases, Supabase, cloud services, and DevOps. Skilled in API development, authentication and authorization, database design, real-time communication, caching, file storage, CI/CD, Docker, mapping and location-based applications. Strong problem-solving, debugging, communication, teaching, teamwork, and end-to-end delivery skills, supported by a Master of Technology in Software Engineering.

TECHNICAL SKILLS

Backend: Node.js, NestJS, TypeScript, Laravel, PHP, REST APIs, WebSockets, Socket.IO, authentication, authorization

Databases & Data: MySQL, MongoDB, PostgreSQL/Supabase, Firebase, database design, indexing, query optimization, caching, RLS

Cloud & DevOps: Docker, GitHub Actions, AWS, Render, Cloudinary, CI/CD, deployment, Linux/Ubuntu

Frontend & Mobile: Flutter, Dart, React, Next.js, JavaScript, HTML5, CSS, Google Maps, Mapbox

Architecture & Engineering: Clean architecture, scalable API design, state management, real-time systems, debugging, production troubleshooting

Tools & Other Technologies: Git, GitHub, Kafka, Jira, Figma, Python, Java, Provider, Riverpod, Bloc, GetX, Redux, Windows

PROFESSIONAL EXPERIENCE

Full Stack Web Developer — MdSmart Construction, Kumba, Cameroon

February 2023 – Present

- Develop and maintain backend applications using Node.js/NestJS, TypeScript, Laravel, PHP, and MySQL.
- Design and implement REST APIs and database-backed features with focus on maintainability, performance, security, and scalability.
- Develop and deploy production applications, including Laravel/MySQL systems hosted on Namecheap.
- Implement secure authentication and authorization for administrative and application users.
- Improve application performance through caching, efficient database queries, and appropriate data-access strategies.
- Implement image and file handling workflows using cloud storage services.
- Troubleshoot application, database, deployment, and production issues and deliver practical fixes.

Full Stack Mobile Developer — Tekstedia, Buea, Cameroon

October 2022 – 2025

- Build full-stack mobile applications using Flutter and backend services, working across UI, application logic, APIs, databases, and deployment.
- Develop authentication and authorization modules and integrate real-time communication using Node.js and Socket.IO.
- Collaborate with a four-developer team to design and deliver a real-time chat application.
- Automate application deployment with GitHub Actions, reducing deployment time by approximately 40%.
- Apply Bloc state management and develop reusable, maintainable application components.

IT Instructor — RHIBMS, Buea, Cameroon

October 2025 – Present

- Teach mobile application development with Flutter, Node.js, and MySQL, as well as web development with HTML, CSS, PHP, and MySQL.
- Supervise student software projects and help learners translate requirements into functional software solutions.
- Explain programming concepts, debugging techniques, database design, and software development practices to learners with different skill levels.

SELECTED PROJECT — LOGISTICS & DELIVERY PLATFORM

- Built and deployed client and driver mobile applications using Flutter, integrating Google Maps and Mapbox for mapping, location, and delivery workflows.
- Developed and deployed a web-based administration dashboard using Next.js with CI/CD configured for automated builds and deployment.
- Designed and implemented backend functionality with Supabase/PostgreSQL, including database relationships, Row Level Security, authentication, storage, and real-time services.
- Implemented real-time chat and data synchronization between clients, drivers, and administrators using Supabase Realtime.
- Designed database indexes, constraints, and queries to support reliable and efficient data retrieval.
- Implemented role-based access controls and RLS policies to protect application resources and user data.
- Developed order, driver, delivery, activity, and communication workflows across mobile, web, and backend components.
- Integrated cloud file storage for images and other application assets and handled production troubleshooting across the application stack.

SELECTED BACKEND PROJECT — OFFLINE-FIRST NOTE TAKING APPLICATION

- Built a production-oriented note-taking system supporting offline note creation and automatic synchronization when connectivity is restored.
- Developed the backend with NestJS and TypeScript and deployed it on Render.
- Configured CI/CD and integrated Cloudinary for file uploads and media storage.
- Implemented JWT authentication, authorization, bcrypt password hashing, OTP generation, and email verification.
- Designed backend APIs and persistent data workflows with emphasis on reliable synchronization and data consistency.

EDUCATION

Master of Technology (M.Tech) in Software Engineering — University of Buea

October 2023 – July 2025

Relevant Coursework: Artificial Intelligence • Deep Learning • Advanced Data Structures • Algorithms • Cloud Computing

PROFESSIONAL STRENGTHS

- End-to-end development: able to work across backend, frontend, mobile, database, deployment, and production support.
- Problem solving: strong debugging and troubleshooting ability with a practical approach to resolving technical issues.
- Software engineering: focus on clean, maintainable, secure, testable, and scalable code.
- Database engineering: experience with relational and NoSQL databases, indexing, query optimization, security policies, and data modeling.
- Communication & teaching: professional English communication with hands-on experience teaching programming and supervising projects.

- Teamwork & ownership: experience collaborating with developers while taking responsibility for features from implementation through deployment.
- Adaptability: comfortable learning and applying different frameworks, tools, architectures, and cloud technologies to solve engineering problems.
